EXPLORING THE COSMIC MYSTERIES

Course	English	Grade	7th Grade	Duration	4 lesson hours (4x40')

This scenario is designed to assist teachers in providing an effective learning experience utilising technology. The teacher may utilise this scenario, which is presented as an exemplar, or adapt it to align with the specific requirements of the students and the physical conditions of the educational institution.

Overview

This learning scenario aims to foster the students' curiosity and engagement by encouraging them to explore the wonders and hidden aspects of the universe through hands-on, inquiry-based activities. By engaging the students in science, technology, engineering, mathematics (STEM) and task-based

: STEM, Comparison, Scientific facts

Learning Goals

Course Objectives

- E7.10.L1. Students will be able to identify the discussion topic about popular science in simple oral texts.
- E7.10.SI1. Students will be able to make simple comparisons.
- E7.10.SI2. Students will be able to talk about past events.
- E7.10.SP1. Students will be able to report on general truths in various ways.
- E7.10.R1. Students will be able to identify specific information in various texts about facts and general truths.
- E7.10.R2. Students will be able to identify specific information about past events.
- E7.10.W1. Students will be able to write short and basic descriptions of facts and general truths.

Related Skills

- Collaboration
- Communication
- Digital literacy
- Active listening
- Critical thinking

PREPARATION

Learning Approaches, Methods, Strategies

- Technology-based learning
- Cooperative learning
- Inquiry-based learning
- Project-based learning
- STEM-integration

Tasks

Teacher

- Creates and designs digital materials such as games, visuals and videos.
- Encourages the students to collaborate in the creation of the Solar System models and writing the rest of the story.
- Fosters active student participation by means of collaborative group learning activities.
- Provides ongoing support and constructive feedback to promote student growth.
- Maintains the students' sense of curiosity and eagerness to explore and learn.

Student

- Engages proactively in STEM-integrated learning tasks, including the designing of digital and physical models of the Solar System.
- Develops and implements a structured plan for writing an interesting end for the 'Lost in Space' story.
- Demonstrates effective collaboration skills in group-oriented digital tasks.
- Shows responsibility in completing assigned work and participating in learning activities.

Instructional Tools / Technologies

Hardware

- Interactive whiteboard
- Tablet
- Computer

Online Tools

- eba.gov.tr
- Digital story creation tools
- tr231 6DTm <060000. tr231 6DTm <060000. tDC 1 6DTm <06000

Instructional Materials/ Tools

- Styrofoam balls
- Paints
- Paintbrushes
- Wooden sticks

APPLICATION

Activities

Before the Lesson

The teacher creates an animation named Fun Planet Facts, using one of the animation creation tools (Annex-1). Then, the teacher prepares a video titled Journey Through the Mysterious Universe using one of the video editing tools (Annex-2). Lastly, for the assessment, the teacher prepares an activity named Fill-in-the-Blanks with Comparatives using one of the web tools for fill-in-the-blank questions (Annex-3).

Lesson 1 (Class)

Pre-Activity

Post-Activity

Following the discussion, the teacher displays the Fill-in-the-Blanks with Comparatives activity and invites the students to work in pairs to complete the activity, where the students can make simple comparisons (Annex-3).

Before the Lesson

The teacher designs a game titled Guess the Image using one of the gamification web tools. The students are required to bring Styrofoam balls, paints, paintbrushes, wooden sticks, cardboard bases, glue and scissors to design the Solar System.

Lesson 2 (IT Class)

Pre-Activity

The teacher shares the Guess the Image game with the students, where the students slide the circle to discover the hidden images, such as a satellite and a space shuttle, and write the word for that image. The student who has the most correct answers or finishes first will be declared the winner. The teacher uses this activity to engage the students in a fun and interactive warm-up activity that activates their prior knowledge and recalls key vocabulary related to the unit.

While Activity

Following the vocabulary activation stage, the teacher asks the students to work in groups of six. Within each group, half of the students are responsible for creating a digital model of the Solar System using one of the artificial intelligence-powered tools, while the other half design a physical model based on the same data. Within each group, basic roles such as data researchers, engineers/builders, presenters and eac BDC BT0 .5 .9

Post-Activity

The students present both their digital presentations and the physical models they have created to their classmates. After all presentations are completed, they organise a "Space Exhibition" in their classroom to display all the models. Their peers provide constructive feedback on their work.

Related Skills: Communication, Collaboration, Critical thinking, Scientific reasoning, Creativity, Productivity, Digital literacy

Before the Lesson

The teacher creates a matching activity titled Match the Verbs using one of the web tools for matching activities. Then the teacher designs a story named Lost in Space using one of the digital story creation tools (Annex-4). Lastly, for the assessment, the teacher prepares an activity titled Answer the Questions using one of the web tools for multiple-choice questions (Annex-5).

Pre-Activity

The teacher invites the students to work in groups of four to create a word cloud using one of the word cloud creation tools. The word cloud may consist of the words related to science, space, planets, and space travels. The students are required to form sentences using the words in their word cloud. This activity combines creativity, vocabulary building, and sentence structure practice.

While Activity

Following the creation of the word cloud, the teacher shares the link of the Lost in Space story with the students and asks them to write the rest of the story (Annex-4). The students continue to work in the same group, brainstorm about the alternative endings and write an interesting, surprising end using the simple past tense. The teacher aims to develop the students' creative writing and digital skills, while reinforcing their understanding and use of the simple past tense through meaningful story completion tasks. The teacher provides prompt feedback throughout the activity.

Post-Activity

The Transcript of 'Fun Planet Facts' Animation

Description: The teacher creates an animation using one of the animation creation tools, adds the Solar System animation, and includes the following sentences about the planets for the students to identify specific information about general truths and comparatives.

Mercury:

Fill-in-the-Blanks with Comparatives Questions

Dear students, fill in the blanks with the comparative forms of the adjectives given in the parentheses.

The Transcript of 'Lost in Space' Story

Description: The teacher creates a story using one of the digital story creation tools, in which the students read about the adventure of astronaut Leo and a cat named Cutie.

First Page: Write, "Exploring the Cosmic Mysteries. Lost in Space" as a title and attach the

Answer the Questions Activity

Dear students, choose the correct option.
