

INNOVATION AND EDUCATIONAL TECHNOLOGIES
GENERAL DIRECTORATE

WILDLIFE EXPLORER

Course	English	Grade	7th Grade	Duration	4 lesson hours (4x40')

This scenario is designed to assist teachers in providing an effective learning experience utilising technology. The teacher may utilise this scenario, which is presented as an exemplar, or adapt it to align with the specific requirements of the students and the physical conditions of the educational institution.

Overview

This learning scenario aims to enhance the students' language skills while exploring wild animals, their characteristics, and environmental protection. To foster engagement and reinforce learning, activities are designed to develop speaking, writing, listening, and reading skills. The students practice vocabulary and concepts through interactive tasks such as matching animals with images, categorising species, and listening to digital stories. Additionally, digital tools like word searches, crossword puzzles, and interactive presentations make learning enjoyable and support key ideas. Web tools for matching activities help the students connect animals with their traits, while web tools for fill-in-the-blank questions test their retention of key vocabulary and concepts. As the lesson progresses, the students engage in brainstorming activities to propose environmental protection suggestions, encouraging teamwork and critical thinking. By integrating cooperative learning, gamification, and storytelling, a dynamic and motivating classroom environment is created. To deepen their understanding, the students write a reflection paper, summarising their thoughts and insights on the lesson. Through group work, digital presentations, and interactive activities, the students develop both creativity and communication skills. Assessment includes interactive tasks, group work, and personal reflection exercises, allowing the teacher to evaluate the students' understanding and language use effectively.

Key Concepts: Wildlife, Habitats, Characteristics of animals, Making suggestions

Learning Goals

Students

- Practise using adverbs of frequency (e.g. usually, always) to describe wildlife behaviours.
- Ask and answer questions about wild animals and their habitats.
- Propose measures to protect wildlife.
- Expand their vocabulary related to wildlife and habitats.
- Identify past and present events described in oral texts.
- Offer simple suggestions in discussions about wild animals.
- Recall and identify the names of wild animals in written texts.
- Utilise digital platforms and engaging activities to enhance the learning process.

Course Objectives

- E7.4.L1. Students will be able to understand past and present events in oral texts.
- E7.4.L2. Students will be able to identify the names of wild animals in simple oral texts.
- E7.4.SI1. Students will be able to ask people questions about characteristics of wild animals.
- E7.4.SP1. Students will be able to make simple suggestions.
- E7.4.SP2. Students will be able to report on past and present events.
- E7.4.R1. Students will be able to understand past and present events in simple texts including explanations and reasons.
- E7.4.R2. Students will be able to spot the names of wild animals in simple texts.
- E7.4.W1. Students will be able to write pieces describing wildlife.

Related Skills

- Collaboration
- Creativity
- Critical thinking
- Digital skills
- Communication

PREPARATION

Learning Approaches, Methods, Strategies

- Cooperative learning
- Gamification
- Storytelling
- Brainstorming

Tasks

Teacher

- Guides the students in using digital tools to explore wildlife-related topics.
- Provides interactive digital materials, such as videos, quizzes, and presentations to support learning.
- Facilitates class discussions and ensures active participation.
- Monitors the students' progress and provides feedback during activities.
- Encourages critical thinking by asking open-ended questions about wildlife conservation.

Student

- Actively participates in technology-based activities, such as online quizzes, interactive games, or digital storytelling.
- Employs digital tools to research and present information about wild animals and their habitats.
- Collaborates with peers to complete tasks and solve problems related to wildlife topics.
- Asks and answers questions using the target vocabulary and grammar structures.
- Reflects on the importance of protecting wildlife and suggests solutions using digital platforms.

Instructional Tools / Technologies

The web tools provided in this scenario are offered as examples. Teachers are free to select and apply any tool they see fit, according to the web tools category. It is recommended that teachers review the web tool in question before use and have a good understanding of the tool's interface.

Hardware

- Interactive whiteboard

Online Tools

- eba.gov.tr
- Web tools for matching activities
- Gamification web tools
- Interactive presentation tools
- Digital story creation tools
- Animation creation tools
- Poster and flyer creation tools
- Web tools for fill-in-the-blank questions

APPLICATION

Activities

Before the Lesson

The teacher asks the students to complete Vocabulary Exercise 1: Wild Animals on EBA. In this activity, the students match words related to wild animals and their habitats with images that represent those words. The teacher then designs a gamified activity titled Animals using one of the gamification web tools. The teacher also creates a presentation called Characteristics of Animals using one of the interactive presentation tools. Additionally, Animals Group and Animal Explorers activities are prepared using web tools for matching activities (Annex-1).

Lesson 1 (Class)

Pre-Activity

The teacher employs the Animals anagram activity as a warm-up, in which the students drag letters into the correct positions to unscramble an animal-related words or phrases such as 'turtle' or 'owl'. This interactive and fun activity helps students engage with the lesson while improving their vocabulary, spelling and problem-solving skills.

While Activity

Following the warm-up activity, the teacher moves on to the Animal Explorers activity. In this task, the students are required to listen to the audio clips and match each word or phrase such as 'caterpillar' or 'monkey', with the corresponding image. After the matching activity, the teacher continues with the Characteristics of Animals presentation. During this activity, the students carefully review the presentation and answer questions about its content. To enhance the effectiveness of the process, the teacher pauses the video at specific points for analysis, enabling the students to develop a deeper understanding of the material. This approach helps students to process information, grasp the key concepts of the presentation and develop their critical thinking skills.

Post-Activity

For the assessment, the teacher invites the students to complete the Animals Group activity, in which they categorise animals into groups such as mammals, reptiles, insects, and birds (Annex-1). The students drag and drop each animal into its correct group, which helps them practise their classification skills and reinforce their understanding of the different types of animals.

Related Skills: Active listening, Digital skills, Critical thinking, Communication

Before the Lesson

The teacher creates a crossword named Animal World and a word search exercise named Body Parts using one of the gamification web tools. The teacher also designs a digital story titled The Big Elephant and the Little Panda using one of the digital story creation tools (Annex-2). Additionally, the teacher prepares an Animal ID exercise using one of the web tools for fill-in-the-blank questions (Annex-3). The teacher divides the students into groups by having them count off in sequence (e.g. "1, 2, 3, 4" for four groups). All the students who say "1" form Group 1, those who say "2" form Group 2, and so on. This method ensures even distribution and is quick to implement.

Lesson 2 (IT Class)

Pre-Activity

As a warm-up activity, the teacher presents the Animal World crossword exercise, in which the students are encouraged to select a word and write it based on the corresponding image. This activity helps the students to connect visual cues with vocabulary, reinforcing their spelling, word recognition, and understanding of animal-related terms in an interactive way.

While Activity

Following the crossword activity, the teacher continues with The Big Elephant and the Little Panda digital story (Annex-2). While the students listen to the story, the teacher emphasises the body parts of the animals mentioned. This strategy promotes vocabulary acquisition by drawing the students' attention to key words within the context of the story, thereby fostering a more engaging and interactive learning experience.

To reinforce the story, the Body Parts word search exercise is presented by the teacher. The students are required to find the hidden words in the letter grid as quickly as possible. The teacher divides the students into small groups beforehand to complete the task. Each group takes turns, promoting active engagement and teamwork.

Once the students have fully completed the digital story and related vocabulary activities, they are required to collaboratively create a story of at least two pages. During the story-writing process, one student may generate visuals using AI powered tools, another may provide voice narration, while the remaining one or two students focus on composing the story text. This approach promotes teamwork, creativity, and the effective integration of digital tools in storytelling.

Post-Activity

The teacher carries out the assessment using the Animal ID activity (Annex-3). In this activity, the students are required to look at the pictures and fill in the gaps, enabling the teacher to evaluate their understanding of the target vocabulary and concepts.

Related Skills: Collaboration, Active listening, Digital skills, Creativity, Communication

Before the Lesson

The teacher creates a labelled diagram activity titled Fun with Animals and an Eco-Friendly Suggestions activity using one of the web tools for matching activities. The teacher also prepares an animation titled Let's Protect Nature using one of the animation creation tools (Annex-4).

Lesson 3 (Class)

Pre-Activity

The teacher guides the students through the Fun with Animals labelled diagram activity. In this activity, the students are invited to drag and drop pins onto the correct part of animal images to match them with their names. This interactive task helps the students to improve their vocabulary and visual recognition skills in a fun and engaging way.

While Activity

After the labelled diagram activity, the students continue with the Let's Protect Nature animation, where they explore various suggestions for protecting nature (Annex-4). The teacher pauses the animation at specific points in the story to ask comprehension questions such as, »What do you think about that?". This strategy ensures that the students understand the content and encourages active engagement. Afterwards, the teacher asks the students to work in pairs to brainstorm and write their own environmental protection suggestions, either by turning to the person next to them or by using a preset pairing method. Each pair focuses on three of the 3Rs (reuse, reduce, and recycle), coming up with one specific idea for each category. They can refer to ideas from the story for inspiration, before presenting their suggestions to the class. This activity helps to reinforce their understanding of the story while fostering teamwork, critical thinking and creativity.

Post-Activity

After the animation, the teacher moves on to the Eco-Friendly Suggestions activity for the assessment. In this task, the students are encouraged to read each suggestion carefully and then match it with the corresponding image using the drag-and-drop method.

Related Skills: Collaboration, Active listening, Critical thinking, Creativity, Communication

Before the Lesson

The teacher creates an exercise named Find the Animal using one of the web tools for matching activities. The teacher prepares a Reflection Paper using one of the interactive presentation tools and brings a hard copy of it to hand out to the students (Annex-5).

Lesson 4 (IT Class)

Pre-Activity

The teacher asks the students to complete the Find the Animal exercise. They look at the shadows of the animals in the picture, click on a circle to hear an audio clip and then match the description to the correct animal. This activity helps the students to improve their listening and observation skills, as well as reinforcing their knowledge of different animals.

While Activity

After the interactive warm-up activity, the teacher introduces a poster creation task. Each pair will design three digital posters using one of the poster and flyer creation tools, based on the three ideas they wrote in the previous lesson about the 3Rs (reuse, reduce and recycle). Each poster should include a clear title, a short explanation, relevant images, and a call to action. Once the posters are complete, the groups will present them digitally to the class.

Post-Activity

To evaluate the students, the teacher uses the Reflection Paper, which includes questions about the names of the animal species learnt and suggestions for actions that can be taken to protect nature, etc., and requires the students to complete it as part of the assessment process (Annex-5).

Homework/Assignment

The teacher sets the students the task of creating a short presentation using an interactive presentation tool. For this presentation, students must choose two animals and provide information about them, including their habitat, classification (e.g. mammal, bird or reptile), weight and height. They will also include photos of the animals, which can be sourced digitally or drawn and coloured in by hand. Additionally, the students will suggest ways to protect these animals and their habitats. Once completed, the students are expected to upload their presentations to EBA before the lesson begins, ensuring they are prepared for class discussions. This activity encourages the students to practise their research skills, showcase their creativity and use technology effectively, all while engaging with their classmates.

Related Skills: Collaboration, Active listening, Critical thinking, Creativity, Communication

Evaluation/Assessment Methods/Tools

- EBA + vocabulary exercise
- Web tools for matching activities
- Web tools for fill-in-the-blank questions
- Reflection paper

Insects

The Transcript of 'The Big Elephant and the Little Panda' Digital Story

Description: The teacher designs the following story using one of the digital story creation tools.

Page 1: Hi, I'm Emma! Yesterday, I watched a wonderful movie about animals. It was about an elephant and a panda who became best friends. They were so different, but they learned to understand each other.

Page 2: Let me tell you their story!

Page 3: In a large forest, an elephant and a panda lived far apart. Even though they were different, they were both special in their own way.

Page 4: The elephant had big **ears** and a long **trunk**. He used his trunk to grab leaves from tall trees.

Page 5: The panda had small **ears** and a round face. She used her strong **paws** to hold bamboo while eating.

Page 6: The elephant was huge. His thick **legs** helped him walk long distances.

Page 7: The panda was much smaller, weighing only 100 kg. Her sharp **teeth** made it easy for her to chew bamboo.

Page 8: The elephant could live up to 60 years. He flapped his large **ears** to stay cool under the sun.

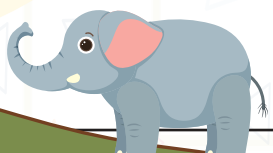

Page 9: The panda lived for about 20 years. Her black and white **fur** kept her warm in cold weather.

Page 10: One day, the elephant and the panda met near a river. They looked at each other and smiled, curious about their differences.

Page 11: The elephant taught the panda how to drink water with his **trunk**. The panda showed the elephant how to hold food with her **paws**.

Page 12: Even though they looked different, they became best friends. Because true friendship is about understanding and sharing!

Page 13: I hope you liked the story. Let's be kind and protect animals. They need our love and care!

Animal ID

Look at the pictures and fill in the blanks with the words in the box.

Elephant

Habitat: Forests in Africa and Asia

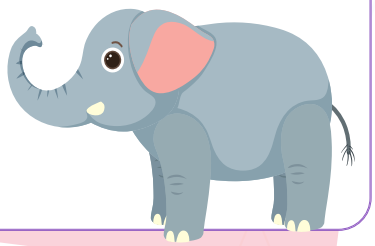

Diet: Leaves

Kind: Mammal

Weight: 5000 kg

Height: 3 m

Lifespan: 60 years

Panda

Habitat: Forests in China

Diet: Leaves, bamboo

Kind: Mammal

Weight: 100 kg

Height: 75 cm

Lifespan: 20 years

Fill in the blanks.

1. The elephant weighs around _____ kilograms.
2. The panda mainly eats _____ and bamboo.
3. The elephant has a lifespan of _____ years.
4. The elephant is about _____ metres tall.
5. The panda weighs _____ kilograms.
6. The elephant lives in the _____ in Africa and Asia.
7. The lifespan of the panda is _____ years.

The Transcript of 'Let's Protect Nature' Animation

Description: The teacher prepares an animation using one of the animation creation tools.

Page 1: The teacher: "Let's talk about your posters about nature. What should we do to protect nature?"

Page 2: The student presents their poster on the board: "We shouldn't hunt animals for their fur."

Page 3: The student presents their poster on the board: "We should use reusable bags."

Page 4: The student presents their poster on the board: "We should plant trees."

Page 5: Two students each present their own posters on the board: "We should protect habitats of animals.", "We shouldn't cut down trees."

Page 6: The student presents their poster on the board: "We should keep forests clean."

Page 7: The teacher: "Thank you for your great ideas, students!"

Reflection Paper

Name: **Date:**

My Thoughts and Feelings:

Write the names of the mammals you learnt today.

Write the names of the birds you learnt today.

Write the names of the reptiles you learnt today.

Write the names of the insects you learnt today.

Write your suggestions for protecting nature.

I would like to learn more about...
